-1 and in ExStyles											
\$WS_EX_CONTEXTHELP	94CA0000	y		y	y	y	y	y	y	9	yyynyynn

Notes

- Blank means no
- Microsoft says that forms are always visible. So I have omitted WS_VISIBLE
- WS_GROUP and WS_MINIMIZEBOX have the same value, so WS_GROUP is not a constant for a Form. So omitted WS_GROUP.
- The value of WS_OVERLAPPED is zero. So omitted it.
- WS_OVERLAPPEDWINDOW is BitOr(WS_OVERLAPPED, WS_CAPTION, WS_SYSMENU, WS_SIZEBOX, ,WS_MINIMIZEBOX, WS_MAXIMIZEBOX)
- WS_POPUPWINDOW is BitOr(WS_BORDER, WS_POPUP, WS_SYSMENU)
- WS_SIZEBOX and WS_THICKFRAME have the same value, so omitted WS_THICKFRAME
- WS_TABSTOP and WS_MAXIMIZE have the same value, so WS_TABSTOP is not a constant for a Form. So omitted WS_TABSTOP.
- WS_CONTEXTHELP doesn't seem to work, but WS_EX_CONTEXTHELP does.
- d = disabled
- GuiCtrlGetState() does not seem to be reliable.
- Style -1 is WS_MINIMIZEBOX, WS_CAPTION, WS_POPUP, WS_SYSMENU
- WS_CAPTION is WS_BORDER, WS_DLGFAME
- Autolt forces WS_CLIPSIBLINGS
- WS_EX_MDICHILD fails
